Dear Mr Mosedale

Mercedes-Benz Model: E-Class E 280 CDI
Chassis No: WDB2110202B089304
Registration: K1CGM

Thank you for contacting the Mercedes-Benz Customer Assistance Center Maastricht N.V.

In regards to your query, I can confirm that even though the wheels and tyres fitted to the vehicle mentioned above are wider on the rear than on the front, the rolling radius is the same front and back. Therefore the space saver spare wheel, (which also has the same rolling radius) is suitable for temporary use on either the front or rear axle.

If you decide to change the wheels, this will change the driving characteristics of the vehicle and considering it is a Sport model, we do not recommend this. The space saver spare wheel has been extensively tested and therefore it is as safe to use then a normal size spare wheel. Your vehicle came from factory with these specifications and we recommend you leave the vehicle the way it is in order to keep the characteristics of the vehicle intact.

Yours sincerely

Remy Mantez
Customer Service Representative
